What is Cloud Native?

KubeCon

CloudNativeCon

Europe 2022

What is CNCF ? Why was it required?

CNCF projects are the
foundation of cloud native
computing

As part of the **Linux Foundation**, we provide support, oversight and direction for fast-growing, **cloud native** projects, including Kubernetes, Envoy, and Prometheus.

What is the CNCF landscape?

PromCon
North America 2021

The goal of the cloud native landscape is to compile and organise all cloud native open source projects and proprietary products into categories, providing an overview of the current ecosystem. Organisations that have a cloud native project or product can [submit a PR](#) to request it to be added to the landscape.

PromCon
North America 2021

What is a CNCF card and what are the details we can infer from it?

When looking at the landscape, you'll note a few distinctions:

- *Projects in large boxes* are CNCF-hosted open source projects. Some are still in the incubation phase (light blue/purple frame), while others are graduated projects (dark blue frame).
- *Projects in small white boxes* are open source projects.
- *Products in gray boxes* are proprietary products.

Kubernetes

Cloud Native Computing Foundation (CNCF)

Orchestration & Management · Scheduling & Orchestration

Kubernetes is an open-source system for automating deployment, scaling, and management of containerized applications

**How to choose a project when we
stumble on a problem for ecosystem?**

1. Match your requirements with project specifications
2. Think about scaling from the start
 - a. Proof of concepts (POCs) for multiple projects
 - b. Worried about migration?

What are some CNCF terminology that people starting out should be familiar with?
